MAX3673 Evaluation Kit

General Description

The MAX3673 evaluation kit (EV kit) is a fully assembled and tested demonstration board that simplifies evaluation of the MAX3673 low-jitter frequency synthesizer with selectable input reference. The EV kit includes slide switches to allow easy selection of different modes of operation. Clock I/Os have SMA connectors and are AC-coupled to simplify connection to test equipment. The EV kit is powered by a +3.3V supply and uses LEDs for signal status indicators.

Features

- ◆ Fully Assembled and Tested
- ◆ Slide Switches for Mode Control
- ◆ SMA Connectors and AC-Coupled Clock I/Os
- ◆ Powered by +3.3V Supply
- ◆ LED Signal Status Indicators

Ordering Information

| PART | TYPE |
|---------------|--------|
| MAX3673EVKIT+ | EV Kit |

+ Denotes lead(Pb)-free and RoHS compliant.

Component List

| DESIGNATION | QTY | DESCRIPTION |
|--|-----|---|
| C1, C6, C7 C11–C13, C16, C18–C22, C24–C27, C29, C30, C32–C39, C41, C42, C46–C50, C62, C63 | 35 | 0.1 μ F \pm 10% ceramic capacitors (0402) |
| C2 | 1 | 33 μ F \pm 5% tantalum capacitor (B case) |
| C3 | 1 | 2.2 μ F \pm 10% ceramic capacitor (0805) |
| C4 | 1 | 0.1 μ F \pm 10% ceramic capacitor (0603) |
| C5 | 1 | 0.01 μ F \pm 10% ceramic capacitor (0603) |
| C28 | 1 | 0.22 μ F \pm 10% ceramic capacitor (0402) |
| D1, D3, D8 | 3 | Green SMD LEDs (1206) Panasonic LNJ311G8PRA |

Evaluates: MAX3673

MAX3673 Evaluation Kit

Quick Start

- Set the slide switches to the following settings:
 PLL_BYPASS = NORMAL
 SEL_CLK = REFCLK0
 DM = 61.44M
 DA = 122.88M
 DB = 122.88M
 $\overline{\text{OUTA_EN}}$ = A0, A1
 $\overline{\text{OUTB_EN}}$ = B0
 FB_SEL = INTERNAL
- Connect a +3.3V supply to VCC (J13) and GND (J4). Set the supply current limit to 450mA.
- Using SMA cables, connect a low-jitter 61.44MHz differential clock source to the REFCLK0 input. Verify that the green LEDs switch on for IN0FAIL and LOCK.
- Using SMA cables, connect the OUTA0 output to test equipment. Terminate all unused enabled outputs (OUTB0 and OUTA1).

Detailed Description

The MAX3673 EV kit simplifies evaluation by providing the hardware needed to evaluate all the MAX3673 functions. Table 1 contains functional descriptions for the switches and indicators.

Clock Inputs

The clock inputs (REFCLK0, REFCLK1, FB_IN) are AC-coupled at the SMA connectors and have on-board 100 Ω differential terminations. For optimal jitter performance it is critical to use a low-jitter, differential, square-wave clock source. If such a source is not available, the clock inputs can be driven with a single-ended sinusoidal or square-wave clock source for functional testing.

Clock Outputs

The clock outputs (OUTA[3:0], OUTB[4:0]) have on-board DC-biasing and are AC-coupled at the SMA connectors to allow direct connection to 50 Ω -terminated test equipment. Unused outputs should be disabled (using switches S9 and S10) or have 50 Ω terminations placed on the SMA connectors.

Table 1. Switch and Indicator Descriptions

| COMPONENT | NAME | FUNCTION |
|-----------|------------------------------|---|
| S1 | MASTER RESET | Momentary switch to reset internal dividers. Not required at power-up. If the output divider settings (DA, DB) are changed on the fly, a reset is required to phase align the outputs. |
| S2 | PLL_BYPASS | Selects normal PLL operation or PLL bypass. |
| S3 | SEL_CLK | Selects the reference clock input. |
| S5 | FB_SEL | Selects internal or external feedback for the PLL. If external is selected, connect any of the A-group or B-group outputs to the FB_IN input. If DA \neq DB, a B-group output must be used. |
| S6 | DM | Selects the frequency of the reference clock inputs. |
| S7 | DA | Selects the frequency of the A-group clock outputs. |
| S8 | DB | Selects the frequency of the B-group clock outputs. |
| S9 | $\overline{\text{OUTA_EN}}$ | Selects which A-group outputs are enabled (see Note). |
| S10 | $\overline{\text{OUTB_EN}}$ | Selects which B-group outputs are enabled (see Note). |
| D1, D2 | $\overline{\text{IN0FAIL}}$ | REFCLK0 failure indicator (green = pass, red = fail). |
| D3, D4 | $\overline{\text{IN1FAIL}}$ | REFCLK1 failure indicator (green = pass, red = fail). |
| D7, D8 | $\overline{\text{LOCK}}$ | PLL lock indicator (green = PLL locked, red = PLL not locked). |

Note: Setting $\overline{\text{OUTA_EN}}$ = "—" and $\overline{\text{OUTB_EN}}$ = "B0" at the same time enables a factory test mode and is not a valid mode of operation.

Microsemi Corporation (NASDAQ: MSCC) offers a comprehensive portfolio of semiconductor solutions for: aerospace, defense and security; enterprise and communications; and industrial and alternative energy markets. Products include high-performance, high-reliability analog and RF devices, mixed signal and RF integrated circuits, customizable SoCs, FPGAs, and complete subsystems. Microsemi is headquartered in Aliso Viejo, Calif. Learn more at www.microsemi.com.
